C-Section Rapid Response Notification System

This system was developed by Advanced Answering Center and Central Vermont Communications to improve the response time for C-section notification in community hospitals. Because patient care is the number one priority, our system eliminates the need for maternity department nurses to have to contact all medical personnel when a C-section needs to be performed. We take care of the notification so the nurses can focus on the patient.

This system includes:

- **Single phone call notification**
- **Group paging to the entire C-Section team based on On-Call Schedule**
- **Web-enabled On-Call Scheduling**
Allows you to maintain your schedule, make last minute changes and enables all team members to print and view the schedule from any PC with Internet access.
- **Daily system testing**
- **Automated response tracking**
Multiple pages are sent at set intervals until each individual responds to the page.
- **Live Telephone Agent follow up**
All other contact numbers are tried for C-section team members if they do not verify receipt of the page.
- **Maternity Department updated on team response at set intervals**
- **Increases response time while allowing nurses to focus on patient care**

Our companies have specialized in providing quality paging and live operator communication services to hospitals for over twenty-five years. We would appreciate the opportunity to customize a service to meet the needs of your hospital. For further information, please contact us at (800) 696-6474 or advanced@cvcpaging.com.
